redirecting the browser to the selected destination using the reference.

21. (Cancelled)

22. (Cancelled)

23. (Cancelled)

24. (Currently amended) The method as defined in claim 20[21], wherein the criterion is
a context includes the URL in[of] web content loaded in the browser.

25. (Cancelled)

26. (Cancelled)

27. (Currently amended) The method program product and data structure as defined in claim 20[21], wherein the criterion is
context includes a type of website whose web content is
loaded in the brower.

28. (Original) The method as defined in claim 27, further comprising the step of determining the type of a website.

29. (Original) The method as defined in claim 27, wherein said type of website is one of the following: a productivity application website, an informational website, or a report generation website.

30. (Currently amended) ~~A program product including computer readable program code for determining an appropriate destination, comprising code causing the performance of the following method steps:~~

a computer useable medium containing computer readable program embodied therein for a browser of an imaging client that, when executed by a computer, causes the following steps to be performed:

upon receiving at the browser a request for a service, automatically getting accessing to a user profile in an autonomous network service unrelated to the requested service and getting a criterion for selection of a destination method for providing a destination;

automatically selecting one of a plurality of destination methods based on ~~the~~ criteria ~~criteria~~; and

calling the selected destination method; and

getting at least one direct or indirect reference to the selected destination; and

redirecting the browser to the selected destination using the reference.

31. (Currently amended) A system for determining an appropriate destination, comprising:

an imaging client with a browser extension component in a browser that upon receiving a request at the browser for a service, automatically accesses a user profile in an autonomous network service unrelated to the requested service and gets a criterion for selection of a destination method for providing a destination;

a component for automatically selecting one of a plurality of destination methods based on ~~the criteria~~ criteria;

a component for calling the selected destination method; and

a component for getting at least one direct or indirect reference to the selected destination; and

a component for redirecting the browser to the selected destination using the reference.

32. (Cancelled) A system for determining an appropriate destination, comprising:
a component for automatically selecting one of a plurality of destination methods based on a criteria; and
a component for calling at least one of the following destination methods
a printer list destination method that may be called to get at least one direct or indirect reference to a printer list destination and cause a browser to browse to that URL destination;
a printer destination method that may be called to get a direct or indirect reference to a printer destination and cause a browser to browse to that URL destination; and
a print now destination method that may be called to get a direct or indirect reference to a PRINT NOW destination that will print using preset printer settings, and cause a browser to browse to that URL destination.
33. (New) The program product as defined in claim 30, wherein the criterion is a URL in web content loaded in the browser.
34. (New) The program product as defined in claim 30, wherein the criterion is a type of website whose web content is loaded in the browser.
35. (New) The program product as defined in claim 34, further comprising the step of determining the type of a website.
36. (New) The program product as defined in claim 35, wherein said type of website is one of the following: a productivity application website, an informational website, or a report generation website.
37. (New) The system as defined in claim 31, wherein the criterion is a URL in web content loaded in the browser.

38. (New) The system as defined in claim 31, wherein the criterion is a type of website whose web content is loaded in the browser.

39. (New) The system as defined in claim 37, further comprising a component for determining the type of a website.

40. (New) The system as defined in claim 39, wherein said type of website is one of the following: a productivity application website, an informational website, or a report generation website.
